Independent Study: Computational Paninian Grammar

Spring 2013

Lecture 1: January 21

Professor: Dr. Dipti Misra Tags: CPG,Intro

1.0.1 Introduction

The Karaka system serves as the basis for description of Panini's Syntax. It is a syntacito-semantic representation of the relations between the verb and the direct participants of the action in the sentence.

1.0.2 Definitions

Panini's work is explained, extended, commented and reinterpreted by many authors like kAtyayana, patanjali, bhartrhari and others. This section includes some of the definitions of the "kAraka".

- Patanjali, in his Mahabhashya defines "kAraka" as "karOti iti" ("The one that does")
- The author of **kAsika** explains it as being synonymous to "hEtu" and "nimitta" (Cause) "kArakam hEtur ity anarthAntaram" (" Cause and kArakam are one and the same")
- **Bhartrhari** uses the term "sAdhanam" to specify kAraka as the one capable of establishing action which is given the term "sAdhya".
- NagEsa defines kAraka as the one that produces the action.

Therefore, we may say that kAraka is a animate/inanimate, passively/actively involved entity in the acomplishment of an action. The relations between the verb ("kriya") and the kAraka are of the type visheshaNa - visheshya (Modifier - Modified).

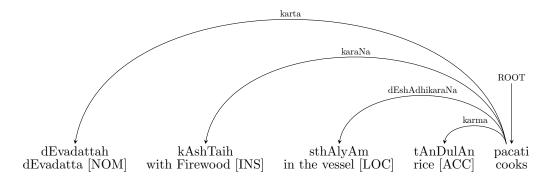

There are six kArakas. They are specified below briefly. (Written as per the order)

- \bullet apAdAnam : Defined as "dhruvam apAye pAdAnam" The Entity which remains constant when seperation takes place
- sampradAnam: "karmaNA yam abhipraiti sa sampradAnam" Is the entity for which the karma is intended.
- karaNam : Is defined as the most effective means of accomplishing the action ''sAhakatamam karaNam"
- adhikaraNam: "AdhAro' dhikaraNam" Specifies the location an time of the activity.
- karma :
- karta: "svatantrAh karta" This is the entity which is considered by the speaker as the most independent of all the other kArakAs in an activity.

1-2 Lecture 1: January 21

1.0.3 Examples

Consider the following sentence and its respective dependency relations.

" dEvadatta cooks the rice with the firewood in the vessel "

1.1 Some theorems and stuff

We now delve right into the proof.

Lemma 1.1 This is the first lemma of the lecture.

Proof: The proof is by induction on For fun, we throw in a figure.

Figure 1.1: A Fun Figure

This is the end of the proof, which is marked with a little box.

1.1.1 A few items of note

Here is an itemized list:

- this is the first item;
- this is the second item.

Here is an enumerated list:

- 1. this is the first item;
- 2. this is the second item.

Here is an exercise:

Exercise: Show that $P \neq NP$.

Here is how to define things in the proper mathematical style. Let f_k be the AND - OR function, defined by

$$f_k(x_1, x_2, \dots, x_{2^k}) = \begin{cases} x_1 & \text{if } k = 0; \\ AND(f_{k-1}(x_1, \dots, x_{2^{k-1}}), f_{k-1}(x_{2^{k-1}+1}, \dots, x_{2^k})) & \text{if } k \text{ is even}; \\ OR(f_{k-1}(x_1, \dots, x_{2^{k-1}}), f_{k-1}(x_{2^{k-1}+1}, \dots, x_{2^k})) & \text{otherwise.} \end{cases}$$

Theorem 1.2 This is the first theorem.

Proof: This is the proof of the first theorem. We show how to write pseudo-code now.

Consider a comparison between x and y:

```
if x or y or both are in S then answer accordingly else  \begin{aligned} &\text{Make the element with the larger score (say } x) \text{ win the comparison} \\ &\text{if } F(x) + F(y) < \frac{n}{t-1} \text{ then} \\ &F(x) \leftarrow F(x) + F(y) \\ &F(y) \leftarrow 0 \\ &\text{else} \\ &S \leftarrow S \cup \{x\} \\ &r \leftarrow r+1 \\ &\text{endif} \end{aligned}
```

This concludes the proof.

1.2 Next topic

Here is a citation, just for fun [CW87].
